

Acoustic Analysis

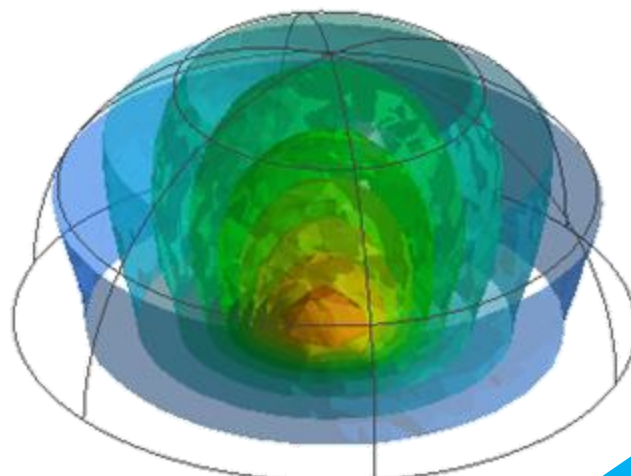

3D/2D Finite Element Method Analysis Software

Drive Your Ideas to Reality

Acoustic solver simulates, just to name a few, the sound waves driven by sound pressure or speed, the sound pressure, and the particle speed. If coupled with piezoelectric analysis, it can solve the sound waves caused by piezoelectric device.

Capabilities at a Glance

- Reflection and diffraction
- Interference
- Speaker
- Microphone
- Sensor
- Sonar

Acoustic Analysis

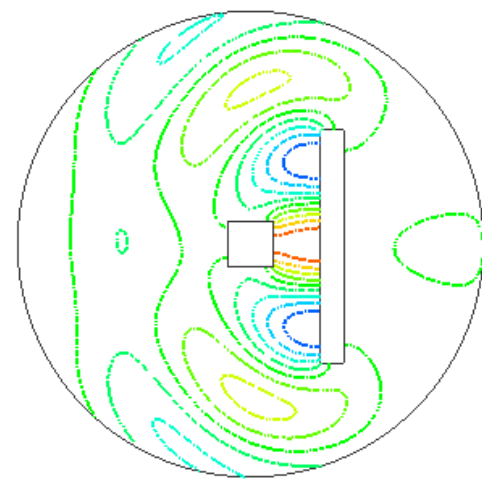

3D/2D Finite Element Analysis Software

Optimization Is What Counts

How you optimize your design is important, especially in the early stages of your engineering activity. It will reduce the incurring time and cost of, product development and making/re-working prototype samples. The acoustic solver provides you with the best possible solution to your design by calculating the acoustic characteristics like reflection, damping, and resonance.

Interference

Reflection and Diffraction

Further Benefits

Comprehensive Functionalities

All in one package from modeling to meshing, simulation, and to results display.

Intuitive Operations

Rich in graphical user interface.
Automatic meshing suitable for each analysis condition.

Efficient Engineering

Capable of batch processing and parametric analysis that are essential for optimizing your design. VBA macro function is available.

Database Management

A wide range of data can be stored and shared among a group of users; materials, body attributes, and analysis conditions

CAD Translator

Supports various kinds of CAD formats to import and export, and lets you use the data on hand straight away.

Multiphysics

In addition to the acoustic analysis, Femtet has a solver for the piezoelectricity. A coupled analysis of these solvers is possible.
